TACHOfresh

Core modules and combination

Modular · combinable · UI or API

RDL

Remote Download

Automated retrieval, schedules, cards and upload status.

PRO

Analysis & Archive

Archive, gaps, infringements, working time and reports.

LIVE

Current control

Driver budgets, position and current operational data.

EXPERT combines PRO, RDL and LIVE

The broad package for end-to-end data, compliance and operational workflows.

3 core modules

1 combined package

2 usage paths: UI or API

● **MODULAR PRODUCT LOGIC**

Start focused. Expand without changing the product core.

The three core modules solve distinct operational tasks. EXPERT combines their main scopes for organizations that want one end-to-end solution.

RDL

Remote Download

RDL automates the recurring collection of driver-card and vehicle files and makes the download process transparent.

- Remote download and manual upload
- Schedules, company cards and upload history
- Optional shorter download intervals

PRO

Analysis & Archive

PRO turns DDD data into archive, evidence and compliance information for vehicles, drivers and fleets.

- 24-month DDD archive
- Vehicle, driver, gap and infringement reports
- Working-time and reporting configuration

LIVE

Current control

LIVE complements the historical DDD basis with current driver status, position and operational data paths.

- LIVE, GPS, D8 and ISO data
- Driver budgets and current status
- Optional geofencing and start/stop reporting

EXPERT

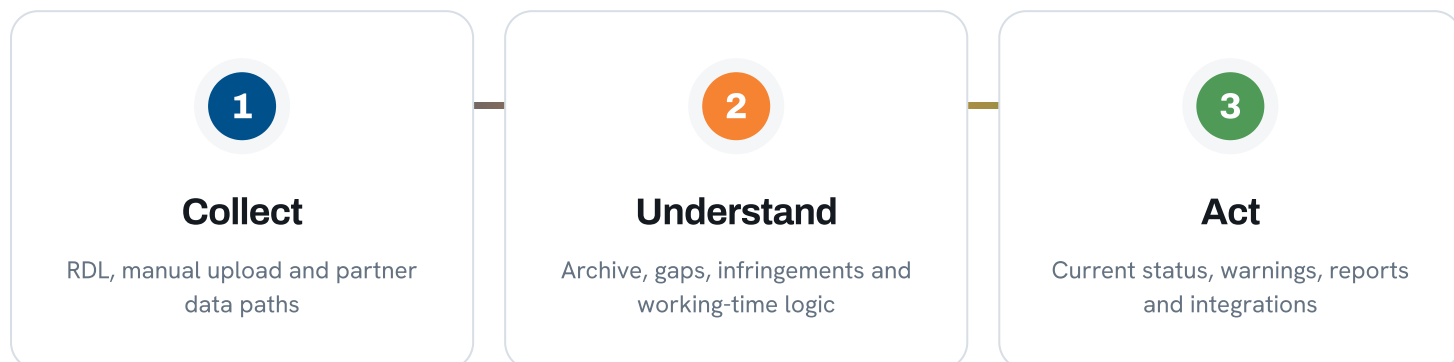

EXPERT combines PRO, RDL and LIVE

EXPERT combines the main scopes of PRO, RDL and LIVE in one broad license package.

- One coherent product environment
- Broad management and reporting coverage
- Further combinations remain possible

A continuous path from collection to current control.

DDD files remain the reliable basis for archive, evidence and analysis. LIVE data adds the current operational view; APIs and file paths connect both to partner platforms.

● LICENSE COVERAGE

What is included in each license scope.

The matrix translates the product story into concrete coverage. A check mark means included in the stated scope. Add-ons are agreed separately.

● PLATFORM CAPABILITIES

Use the TACHOfresh interface or integrate the product core.

Partners can use a ready interface, a white-label scenario or selected data and results through APIs and file transfers.

Ready UI

A complete interface for operational users and fleet workflows.

White label

Use the proven product logic inside a partner-branded environment.

API & files

Connect data, reports and results with existing platforms and processes.

● SPECIALIZED PRODUCT CORE

Deep tachograph compliance instead of surface-level reporting.

TACHOfresh brings together driving and rest-time logic, national working-time specifics, data gaps, infringements, evidence and growing source coverage.

01

EU driving and rest-time logic

02

National details and working-time rules

03

Scalable on-demand analysis

04

Growing device, telematics and file sources

A portfolio that grows with the customer.

RDL, PRO and LIVE can be used separately or in combination. EXPERT brings the main scopes together. The shared product core keeps data, compliance and integration consistent across the portfolio.
